FISK MEADOWS WILDLIFE MANAGEMENT AREA
AND
CHESTERFIELD WILDLIFE CONSERVATION EASEMENT
(Chesterfield)

- Size: 580.2 acres of wildlife management area and 491 acres of conservation easement. Topography consists of gentle to moderate slopes ranging from 1110-1517 feet in elevation.
- Access: No formal parking lots. Parking can be done at the end of Old Chesterfield Road from the east side. Four-wheel drive is recommended. A log landing is located along Chesterfield Road.
- Vegetation: The “meadow” is surrounded by Hemlock, White pine and northern hardwoods (Sugar maple, White ash and Yellow birch). Hardwoods predominate as one travels away from the meadow. Ram Hill is mostly northern hardwoods with an increasing mix of conifers westward to Scout Pond.
- Water: The ~100 acre “meadows” forms the headwater for Dead Branch Brook. Old Chesterfield Road bisects the meadows. Beavers have flooded the upper section to create excellent waterfowl habitat. The downstream section has been flooded at various times over the years
- Wildlife: Deer, bears, snowshoe hares, fishers, otters, beavers, mink, waterfowl, turkeys and great blue herons can be found here.
- Special Regulations: No hunting allowed between Memorial Day through Labor Day on Conservation Easement lands.
